

# ATP / RLU Levels

**>501**

## Hazardous To Health

Surfaces need serious cleaning and have a high risk of contamination from disease-causing bacteria and viruses not safe to touch.

**201 - 500**

## Very Dirty

Surface needs cleaning and has a medium to high risk of contamination from disease-causing bacteria and viruses. Average count of high touch areas.

**81 - 200**

## Dirty

Warning: Surface needs cleaning and has a medium risk of contamination from disease-causing bacteria and viruses. Average count after domestic cleaning products used.

**31 - 80**

## Good & Clean

Most microbes have been neutralised and the surface is safe for everyday use. Average count on a chopping board.

**11 - 30**

## Almost Sterile

Almost all of the microbes have been neutralised. Surface is clean and close to sterile good for food preparation and medical facilities.

All levels based on the Hygiene Suggested Scale.

Contamination from all surfaces is still possible.

RLU / ATP tests are light tests on living organisms, not including viruses.

RLU / ATP test are only for area tested not entire area.
